
MADE FOR UTAH · FIELD NOTE 21

Stop winter at the entryway.

A small entry routine makes slush and tracked-in grit easier to manage. Choose mats and cleaners compatible with your flooring and deal with moisture before it spreads.

YOUR KIT

Floor-safe entry mat; boot tray; absorbent cloth; suitable vacuum

YOUR FLOOR IS NOT A BOOT TRAY. · EDITORIAL PHOTOGRAPHY

Three deliberate steps.

01 Create the landing zone

Set a stable mat and tray where shoes come off without blocking the door. Check that backing materials will not damage the floor.

02 Lift grit before wiping

Remove loose grit with an approved tool. Blot wet areas promptly, then use the floor maker's cleaning method for remaining marks.

03 Reset the catchment

Empty and dry the tray and clean the mat regularly. Check under both for trapped moisture before replacing them.

The final check.

- ☐ Walking route clear
- ☐ No moisture under the mat
- ☐ Tray emptied and dried

Know when to pause.

Do not use vinegar or a salt-removal recipe on an unidentified floor. Identify the material and follow its care guidance.

The clean starts where the shoes stop.

Always follow the surface maker's care instructions and product label. Never mix cleaning products. This guide is for ordinary household care, not hazardous-material remediation. Product-specific instructions take priority.
